## TECHNICAL PROJECTS:

**MY JOB STATUS :** *An online tracking tool for job seekers to review and update their job applications status.*

[github1\(front-end\)](#) | [github2\(back-end\)](#) | [demo](#)

- Created using ReactJS/Redux for front-end design while fetching information from Rails RESTful API on the back-end with the uses of a PostgreSQL Database
- Applied JWT Tokens for Client-Side authentication and used CORS to allow cross-domain requests in Rails API application
- Used TDD pattern with RSpec for testing and building Rails REST API
- Incorporated React-Router for RESTful routing to render application pages

**WORKOUT TRACKER 2.0:** *A daily tracker for workouts, meals and macros (proteins, carbs and fats) to support health goals.*

[github](#) | [demo](#) | [live](#)

- Applied Omniauth and Devise to enable user authentication via Facebook
- Utilized JQuery/Ajax/Javascript for frontend design and efficient data fetching
- Used Rails API form to create resource and render page without refresh and revealed has\_many relationship in the JSON that is rendered to the page
- Translated JSON responses into Javascript Model Objects with prototype method

**NEW YORK TIMES TRENDING NEWS:** *A Ruby gem that provides a CLI for browsing up-to-date stream of news.*

[github](#) | [demo](#)

- Designed user interface using command line interface (CLI) and utilized the Nokogiri gem and OpenURI for data scraping
- Applied object oriented concepts for application domain

## TECHNICAL SKILLS:

HTML, CSS, Bootstrap, Ruby, RSpec, SQLite3, Sinatra, Rails, OAuth, JavaScript, jQuery, AJAX, React, Redux
